DT04 Rec'd PCT/PT0 2 9 SEP 2004

In the claims

The following amendments are made with respect to the claims in the international application PCT/GB03/01488.

This listing of claims will replace all prior versions and listings of claims in this application.

1 (Original). A sensor for the detection of an analyte, which comprises a holographic element comprising a medium and a hologram disposed throughout the volume of the medium, wherein an optical characteristic of the hologram changes as a result of a variation of a physical property occurring throughout the volume of the medium, wherein the medium is obtainable by formation *in situ* in the presence of a pore-forming agent, wherein the agent is not present in the sensor or does not react with the analyte and the sensor.

2 (Currently amended). A<u>The</u> sensor according to claim 1, wherein the physical property is the size of the medium.

3 (Currently amended). A<u>The</u> sensor according to claim 1-or-claim 2, wherein the optical characteristic is the reflectance, refractance or absorbance of the holographic element.

4 (Currently amended). A<u>The</u> sensor according to any preceding claim 1, wherein the agent is a gas.

Docket No. GJE-7020

4

5 (Currently amended). A<u>The</u> sensor according to any of claims 1 to 3 claim 1, wherein the agent is a liquid.

6 (Currently amended). A<u>The</u> sensor according to <u>any-preceding</u> claim<u>1</u>, wherein the agent is water.

7 (Currently amended). A<u>The</u> sensor according to any of claims 1 to 3 claim 1, wherein the agent is a solid obtainable by extraction of the agent after the formation.

8 (Currently amended). A<u>The</u> sensor according to any preceding claim<u>1</u>, wherein the medium is a polymer obtainable by the polymerization of monomers *in situ*.

9 (Currently amended). A<u>The</u> sensor according to claim 8, wherein the monomers include hydroxyethyl methacrylate.
